

## **ON SHOUT CAST MANAGER**

**V. R. PAWAR, P. R. DEVALE AND D. T. MANE**

### **Abstract**

The clients wanted an Client Server based system to solve all their problems related to different operations. They wanted a system which could minimize the time taken for any activity that involves interaction between different songs played on their machine through the concept of streaming. They needed a system which could easily fetch A/V file onto their media player.

The clients needed a system which would help them maintain all the data in a centralized manner. They needed a system wherein the admin has all the rights regarding the use of the system. Admin should have username and passwords for the proper authentication purpose. At any point of time the admin should be able to change the time slots allotted for their knowledge based program.
