

WASTE MANAGEMENT THROUGH ENVIRONMENTAL EDUCATION

MANOJ DATAR

Abstract

Environment is the total sum of all the conditions and influences that interact with the living beings. The environmental pollution crisis in India is increasing day by day. The increasing industrialization, urbanization, growth of chemical industry, e-industry, IT industry have also brought its dangerous effects on environment. The protection of environment has now become a national concern to us. The paper is an attempt to identify the wastes in the aquatic environment and to provide some suggestions to create awareness among people so as to minimize the degradation of the environment. In the present paper physicochemical aspects of Betwa river water at Vidisha (M.P.) are studied.

Key Words: Betwa river, Pollution, Education, Environment.
