

ON SPLITTING OFF OPERATION FOR GRAPHS AND ITS APPLICATIONS

M. M. SHIKARE & K. V. DALVI

Abstract

By applying the splitting off operation [6] on a graph we obtain a new graph. In this paper we characterize cycles and spanning trees of the new graph in terms of the cycles and spanning trees of the original graph. We also give some applications of this operation.

Key Words: *Spanning tree, Splitting Off operation, bipartite graph, connected graph.*
