#### Abstract

Firstly, we study the solution of equation $\diamond^{k}\left(\triangle+m^{2}\right)^{k} u(x)=f(x)$. Finally, we study the solution of nonlinear equation $\diamond^{k}\left(\triangle+m^{2}\right)^{k} u(x)=f\left(x, \triangle^{k-1} \square^{k}(\Delta+\right.$ $\left.m^{2}\right)^{k} u(x)$ ), where the operator $\diamond^{k}$ and $\left(\triangle+m^{2}\right)^{k}$ are Diamond operator and Helmoltz operator, respectively. $n$ is the dimension of the Euclidean space $\mathbb{R}^{n}$, $x=\left(x_{1}, x_{2}, \ldots, x_{n}\right) \in \mathbb{R}^{n}, k$ is a nonnegative integer, $u(x)$ is an unknown and $f$ is a given function. It is found that the existence of the solution $u(x)$ of such equation depending on the condition of $f$ and $\triangle^{k-1} \square^{k}\left(\triangle+m^{2}\right)^{k} u(x)$ and moreover such solution $u(x)$ related to the wave equation and biharmonic equation depending on the conditions of $p, q$ and $k$.

Key Words : Diamond operator, Laplace operator, Helmoltz operator, Generalized functions.
AMS Subject Classification : 46F10.
